CARRIER

CARRIER CONDITIONS

CARRIER status: This indicates the dog has inherited a recessive allele for a genetic trait or mutation. This is not enough to cause symptoms of the disease, but is important to bear in mind if the dog ever has offspring.

 Carrier

System: **Integument**

Condition: **Ichthyosis (PNPLA1)**

CARRIER

II

AT RISK

Lakeshore's Stunning Example is a carrier for a variant in the PNPLA1 gene. As a carrier Lakeshore's Stunning Example is unlikely to show signs of ichthyosis, but could pass the variant on to the next generation. If you choose to breed Lakeshore's Stunning Example, we highly recommend testing any potential mates. Breeding to another carrier is not recommended as this could produce affected puppies.

DESCRIPTION

This skin disorder gets its name from the thick, darkly pigmented scales of skin ("ichthys" is Greek for "fish") that affected dogs display on their noses, paw pads, and muzzles. Over time these scales can get so thick that they can crack and cause fissures, leading to considerable discomfort. Ichthyotic dogs also typically have large, greasy flakes of dandruff, but unlike dogs with dry skin, they aren't itchy. There is no definitive treatment for ichthyosis: typically, ichthyotic dogs are maintained on a continuous treatment of mild anti-dandruff shampoos and moisturizing rinses.
